

BIFOLD DOOR

100 SERIES

'Aria' or 'Summit' handles are finished in black, white or satin chrome

Flush-bolts (satin chrome only) are fitted top & bottom on fold away panels

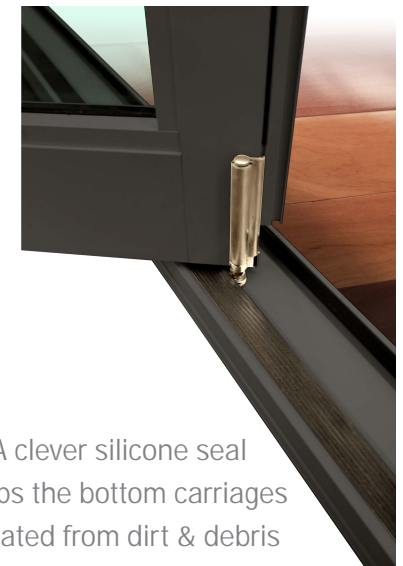

Bifold doors are based around a nominal 100mm deep aluminium frame, & are available with 2 options to suit different installation methodologies. Hardwood reveals are ideal for an architraved internal finish. For a more 'commercial' look the reveals can be replaced with an aluminium section

A shallow sill profile minimises the threshold between indoor & external flooring levels

A wide selection of high performance single glazings can be specified within the 100 Series. These include body tints (coloured), low emissivity coatings (low E) & a range of laminated glass up to 6.76mm in thickness

Centor Architectural bottom-rolling carriages ensure the smoothest of operation. With most weight bearing on the sill, overhead works are minimised

A clever silicone seal keeps the bottom carriages isolated from dirt & debris when in service
